

Badminton stroke practicing machine

Innovator: Mr Subhash Das, Nagaon (Assam)

- A simple machine for practicing the badminton game without partner.
- The motor slides conveyor belt along the two rods thereby moving the shuttlecocks with it.
- Small pockets are attached to the belt, which holds the shuttlecock and drops the same one by one when it reaches the end of the second rod

Challenge:

- To design and develop badminton stroke practicing machine capable of dropping the shuttle in varying direction at different speeds randomly
